This bestselling visual reference helps both students and professionals understand the vocabulary of architectural design by examining how space and form are ordered in the environment. Essential and timeless, the fundamental elements of space and form still present a challenge to those who crave a deeper understanding. Taking a critical look at the evolution of spaces, Architecture distills complex concepts of design into a clear focus that inspires, bringing difficult abstractions to life. The book is illustrated throughout to demonstrate the concepts presented, and show the relationships between fundamental elements of architecture through the ages and across cultures. Topics include: Primary elements and the principles of space design Form and space, including light, view, openings, and enclosures Organization of space, and the elements and relationships of circulation Proportion and scale, including proportioning systems and anthropometry

This book includes a code that can be used to access an online interactive resource hosted by the publisher, Wiley. The resource is specifically intended to be utilized by students. The link provided (on the inside front cover of the book is not correct. The link provided (as of 10/30/14) brings you to a page on Wiley's site that does not have the "Login" feature described. A next step (not described in the instructions" is to select "Visit Companion Site" under "Student Resources." Once there, you can begin the login process to access the interactive resources for students (aka readers). I cannot emphasize enough that what you are paying for and getting here is far more than some architectural sketches in a book. The interactive online resources include a guided (narrated) tutorial with animated computer graphics and photos that ARE NOT IN THE TEXT which teach basic architecture. In fact the collective resources, which you can progress through sequentially or access randomly are substantially an introductory architecture (on form, space, and order) course in full. As the title suggests, the focus is on form, space, and order. There is no substance on materials, textures, and light (although there are many of the figures suggest and explain views and light, they are not focused directly on light, just indirectly. The examples given represent a reasonable diversity of global architecture, but tend to be focused on commercial or institutional architecture (churches, schools, stadiums, public venues, etc.). There are examples of private residences, villages, etc., but these are clearly a minority. Explanations of space in the context of these is similar in scale. But there are still many examples of personal space.
